

SailPoint launches Privileged Task Automation capability for automating and delegating the execution of privileged tasks

October 22, 2024

Privileged Task Automation revolutionizes the way organizations manage the execution of tasks that require privileged access

AUSTIN, Texas – Oct. 22, 2024 – [SailPoint Technologies, Inc.](#), a leader in enterprise identity security, today announced the launch of SailPoint Privileged Task Automation, a new Identity Security Cloud capability, powered by SailPoint Atlas. SailPoint Privileged Task Automation helps organizations improve productivity and security by automating and delegating the execution of repeatable privileged tasks.

Most routine privileged tasks are often repetitive and performed almost daily. Yet, many organizations are still managing these tasks manually, leveraging scripts or siloed tools that may increase inefficiencies and open security gaps. Privileged Task Automation helps organizations take a holistic approach to how they manage tasks and protect their identities, based on the type of access needed. The new capability provides an easy-to-use, drag-and-drop interface for workflow configuration and an out-of-the-box library of customizable templates to help accelerate workflow adoptions. This can significantly enhance IT operations' accuracy and efficiency and strengthen governance.

In a recent survey, 58% of respondents said they have privileged access credentials coded into automation tools or scripts, meaning they are available for anyone to see. This is a huge vulnerability for organizations. In fact, the [Identity Defined Security Alliance 2024 Trends In Securing Digital Identities](#) revealed that stolen credentials are the second highest reason surveyed organizations experienced an identity-related type of incident in the last year. SailPoint Privileged Task Automation integrates with common credential vaults and automates the use of credentials for each task without exposing them to the user, helping enhance productivity and security.

"Privileged Task Automation is another way we continue to leverage the power of our platform, SailPoint Atlas, to introduce new capabilities, which solve for new use cases and accelerate time to value for our customers," said Matt Mills, President, SailPoint. "At SailPoint, we believe all identities may need privileged access for various tasks. Next-generation identity security will handle privilege as an extension of the organization's existing identity security platform, enabling comprehensive oversight across an organization's entire identity landscape."

Privileged Task Automation is designed to be complementary to Privileged Access Management technologies by allowing organizations to assign specific privileged tasks that would normally require full privileged session management, and by leveraging credentials from PAM vaults. This approach accelerates task execution in a secure way, delivering real value to our customers.

"The launch of SailPoint Privileged Task Automation further demonstrates our commitment to helping organizations solve their identity security challenges, across all types of identities, including privileged identities," said Ben Cody, SVP, Product, SailPoint. "It also helps organizations mitigate the challenges associated with the IT and security talent shortage and alleviate the burden from privileged users so they can focus on value-add activities rather than repetitive tasks."

Current Identity Security Cloud Business and Business Plus customers can leverage Privileged Task Automation immediately.

About SailPoint

SailPoint equips the modern enterprise to seamlessly manage and secure access to applications and data through the lens of identity – at speed and scale. As a category leader, we continuously reinvent identity security as the foundation of the secure enterprise. SailPoint delivers a unified, intelligent, extensible platform built to defend against today's dynamic, identity-centric cyber threats while enhancing productivity and efficiency. SailPoint helps many of the world's most complex, sophisticated enterprises create a secure technology ecosystem that fuels business transformation.
